

# MOUNT RONAN

## WHITE SUFFOLKS & MATERNALS

*Specialising in the breeding of elite quality prime rams*

NINETEENTH ANNUAL  
RAM SALE

**Tuesday 29th September 2015**

**On-property at York  
Commencing at 1.00pm**

Inspections from 11.00am.  
BBQ lunch and refreshments provided

---

**80 WHITE SUFFOLK RAMS 80**  
**82 MATERNAL RAMS 82**

**SPECIALY SELECTED FLOCK RAMS**

---

**ACCREDITED BRUCELLOSIS FREE FLOCK No. OV/AC/044**

One-year-old ewe lambs with newborns at Mount Ronan. World class mothering genetics in action. (26th August 2014).

***"The profitability of our producers' prime lamb enterprises is the key to the future of Mount Ronan."***

# WELCOME TO MOUNT RONAN.....

2015 marks the 50<sup>th</sup> anniversary of my introduction to the wonders of sheep breeding. Such a young fellow then, a pretty oldish fellow now, but the excitement has continued to intensify over time.

In the general shift away from specialist wool production, the use of high-powered, high-efficiency sheep genetics allows producers to “ratchet up” on-farm profitability in their prime lamb enterprises. It offers them greater control over marketing decisions and definitely decreases their risk profile.

The lamb industry is transitioning to one of sectoral specialization. There will be opportunities for producers to specialise in breeding, growing or finishing lambs to suit their environmental circumstances, farm structure or lifestyle considerations. Right now I am witnessing the greatest change in the sheep industry in my lifetime..... and it is all good news as far as I am concerned.

Oh to be that younger fellow again!!!

Guy with his first stud lamb.....  
a Shropshire, 1968.

## What is the Mount Ronan breeding program all about?

The Mount Ronan breeding program is aimed “fairly and squarely” at maximising producers’ lamb enterprise profitability. The difference between our breeding program and most others is that we have always placed a much greater breeding value on ewes than rams. I truly believe that the greatest rate of genetic gain is made by a detailed study and observation of female type and performance. This view is supported by investigation into cellular physiology at a mitochondrial level. The mitochondria are the power stations of the living cells.

The identification of those truly proven-elite ewes in our flock which possess outstanding production genes is our focus. We select sons of these ewes to spread their genes widely throughout the flock, and we also introduce new genetics via these ewes. If they are artificially inseminated to new-blood rams and the progeny are less than outstanding performers, then we know that those rams are simply not good enough for our purposes.

The use of outside genetics is essential for genetic diversity, and also helps with genetic linkages on Lambplan and greater accuracy of ASBVs.

This year we embryo flushed six of our highest efficiency ewes and 43 lambs were born. Most are excellent and some are really outstanding. We will probably be increasing the scale of the ET program subject to annual analysis.

As usual we used ram lambs for the 2015 drop with consistently good results. The progeny of some of the ram lambs are simply magnificent and we have identified at least three of these young sires as real ‘five star’ quality.

## **THIS YEAR'S SALE OFFERING**

The rams we are offering to producers are fit and athletic, and ready to go to work. We are really satisfied that we can again offer a line of rams with a positive ASBV production balance. In other words, positive growth with positive muscling. There is some variation in genetic fat levels for producers chasing extra yield for later maturity lamb finishing systems.

Generally however, our genetic offering targets the production of prime lambs with high early growth to heavy weights. The genetic balance between early growth, fat and muscling is the key for a profitable enterprise, combined with outstanding mothering attributes, constitutional strength and excellent producer management.

Our flock is accredited Brucellosis free (OVAC 44), and all rams have received Glanvac B12 6in 1, Eryvac and Scabby Mouth vaccinations.

In addition, the rams have been vaccinated for OJD, which accounts for the horrible lumps on their necks.

This is being done as insurance against the possibility of a false positive diagnosis during abattoir surveillance.

We anticipate that these rams will continue to uphold the wonderful reputation of Mount Ronan genetics.... a reputation forged over decades for outstanding commercial performance and constitutional strength.

We expect that by the time this sale is completed, you will feel well acquainted with the **super sire MOUNT RONAN 100337**.

337 was a complete standout in the 2010 lamb drop. He grew at a phenomenal rate and was extremely powerfully built. He did not grow into a very big adult sheep, but was extremely heavy. His progeny follow the same growth curve.

He has a uniquely quiet temperament which he passes on to all his progeny, and has an extraordinarily strong constitution.

To add to his amazing production traits, 337 is in the top 5% of tested sires for tenderness, and in the top 10% of tested sires for intra-muscular fat. In other words, his progeny will eat wonderfully well.

These attributes are sheer gold in a production breeding program.

2015 sale rams – 3 weeks ago. Just starting to flesh up ready for the big day. Started trail feeding some pellets 3 weeks before the sale, then put on ad lib pellets for the last week.

## **Long history of production genetics**

My concept of the ideal meat sheep has not changed over the last 50 years. The heavily-muscled, fast-growing, medium-legged animal with smooth shoulders, a long deep barrel, width across the loins and area in the hind quarters, has always been the Mount Ronan type. Coupled with this is selection for hardiness and mothering ability .... females which lamb easily and grow lambs quickly..... females which can count to at least three and nourish multiple offspring.

The transition from a breeding program producing specialist terminal/meat genetics to one including specialist maternal/mothering genetics has been a very simple one for Mount Ronan. All those decades of selection for mothering ability, temperament and maternal performance has resulted in terminal ewes which are exceptional maternals as well.

When the dedicated Maternal program was initiated in 2003, we introduced the best available maternal genetics from Australia and New Zealand. We found some outstanding individual sheep, but generally a lot of the introduced stock was weeded out pretty quickly. They simply "lacked grunt", and essentially all of them were deficient mothers compared to our home-bred ewes.

It was the infusion of the hardy, high-performance Mount Ronan White Suffolk genetics which, when incorporated into the foundation stock, had the greatest impact on production. Most Mount Ronan Maternals have at least 50% Mount Ronan White Suffolk genetics in their makeup.

We have selectively introduced New Zealand maternal genetics into our program over more recent years but have found them to be lacking in grunt generally. After a couple of "run throughs" of the White Suffolk flock, they begin to harden up constitutionally.

### **The 'grunt gene' remains King at Mount Ronan !!.....**

**.....that's the Mount Ronan trademark.**

The type of sheep we are breeding now are the type of sheep we have always produced..... it's just that we are continuing to identify those truly outstanding animals which provide the extra genetic boost in performance with consequent higher levels of profitability per hectare.

Our identification and utilisation of those outstandingly efficient females will be intensified. We have now developed the measurement tools to enable us to identify them more easily. We will continue to embryo flush the proven elite ewes and concentrate on breeding from their top sons and daughters.

The hardy Mount Ronan White Suffolk genetics powers our Maternal program. These genetics go back directly to the outstanding Suffolk flock I founded in 1969.

2006 drop White Suffolk lambs at Mount Ronan. Muscular, growthy, high-yield genetics have always been the focus over the decades.

### **First maternal ewes resulting from the ET program in 2003.**

These sheep were a mixture of 25% Finn, 25% Texel, 25% East Friesian and 25% Border Leicester genetics.

Producers who used ram progeny out of these ewes received outstanding results in the early days of the Maternal program. The modern Maternals we are now producing are much more powerful, productive animals.

# WHITE SUFFOLK PROGRAM STILL TOP SHELF

The table below shows the progress of Mount Ronan terminal flock ASBVs in the last decade, compared with the average of all LAMBPLAN (SGA) measured White Suffolk flocks in Australia (Terminal 23). There is an immense difference between the average muscle ASBV (Pemd) of the Mount Ronan White Suffolk flock and that of the average White Suffolk flock in Australia. The average Mount Ronan White Suffolk sheep on LAMBPLAN is almost **twice as muscular** as the average White Suffolk sheep on LAMBPLAN.

Mount Ronan White Suffolk sheep have always been far more muscular than the average White Suffolk sheep on LAMBPLAN in Australia, and the flock has always possessed higher than average growth-rate genetics.

As a result of these factors, and because Mount Ronan birth weight genetics are below average, lambs sired by Mount Ronan rams are generally born easily and grow muscle mass very quickly. This greatly reduces time to slaughter and results in increased carcase yield.

The average Pfat ASBV for the Mount Ronan White Suffolk flock is ideal to cater for matings with Merino or Maternal ewes.

Above: Comparison between the average eye muscle depth of the White Suffolk flock on LAMBPLAN and the average eye muscle depth of the MOUNT RONAN White Suffolk flock on LAMBPLAN.

Above: Comparison of MOUNT RONAN Lamb 2020 Index with the White Suffolk LAMBPLAN tested breed average.

Terminal - 23								
	Bwt	Wwt	Pwwt	Pfat	Pemd	LAMB2020	Carcase +	Counts

2013	0.21	7.83	12.58	-0.47	2.09	111.8	188.0	290
2014	0.22	8.26	13.29	-0.49	2.31	112.7	194.0	404

Using the power of Mount Ronan genetics will put more money in your wallet ...

**The accuracies of the ASBVs are extremely high because Mount Ronan has measured more sheep on LAMBPLAN than most other stud flocks in Australia.....and**

**The ASBV's of the Mount Ronan White Suffolk flock are impressive compared to the average ASBVs of all the White Suffolk flocks that are recorded on LAMBPLAN, particularly because the ASBV lines are so well balanced.**

	BWT	WWT	PWWT	PFAT	PEMD	LAMB2020	CARCASE +
Mount Ronan average	0.22	8.26	13.29	-0.49	2.31	112.7	194.0
White Suffolk average	0.29	8.00	12.65	-0.55	1.19	110.7	178.7

# **SO WHAT'S THE DIFFERENCE BETWEEN OUR MATERNALS AND OUR WHITE SUFFOLK SHEEP?**

The breeding objectives for our White Suffolks and Maternals are heading in the same direction really. The two "types" of sheep we are producing are becoming pretty interchangeable and that is a great advantage for us as well as for our producers. We have significantly increased the diversity of the gene pool, improved type stabilisation and created significant linkages between the Terminal and Maternal datasets on Lambplan. This will improve ASBV accuracies over time.

Perhaps the main differences between the two breeding programs at the moment is that we are concentrating on muscling up the Maternals and adding more 'grunt' genes, plus a bit more fat and a bit more fertility. We have been shifting our focus towards higher early growth over the last few years in both programs and we have also raised fat levels in the White Suffolk flock to complement the 100-day growth focus.

**Whether the ewe lambs are from Mount Ronan White Suffolk or Mount Ronan Maternal rams, they are ideally suited for use in a self-replacing lamb breeding flock.....so start collecting them immediately!!!**

Our most recent and most critical innovation, as I mentioned before, is the identification of the most genetically efficient ewes in both flocks and our greatest genetic gains will result from better use of these outstanding sheep.

## **LAMB 2020 INDEX**

Lambplan has introduced another Terminal Index to accompany the Carcase Plus Index. The **LAMB 2020 Index** has its emphasis on early growth to weaning and post-weaning and penalises excessive fatness or leanness. It includes birth weight, improved parasite resistance and muscling. This index is ideal for producing 20 – 24kg carcasses. The **Carcase Plus Index** is calculated using 65% emphasis on growth, 5% emphasis on leanness, and 30% emphasis on muscling. It does not include birth weight, weaning weight, or worm resistance. This index is better suited to the production of lambs over 24kgs carcase weight.

When selecting rams for breeding programs, buyers need to pay special attention to the ASBV's in order to choose the most appropriate ram for their individual enterprise. Indices are simply a guide for selection.

## **LAMBPLAN'S TRAIT LEADERS**

Many of our sale rams are trait leaders. In other words, they are in the top 10% of the LAMBPLAN database for growth, leanness, muscling, or a combination of these traits. They are in the top 10% of all the rams of all breeds measured in the LAMBPLAN program in 2013 in Australia and New Zealand.

**Trait leaders are noted in the comments for each ram.**

### **Please note:**

Mount Ronan stipulates that all rams which are to be registered and transferred into stud flocks will require a total payment of \$2000 (excluding GST).

If rams are purchased at the auction for less than \$2000 and the buyer wishes to have the rams transferred and registered for stud use, then the purchaser will be required to make up the difference between the purchased price and \$2000 (plus GST) before the transfer and registration can take place.

# **MOTHERING SCORE**

When the ewes are lambing at Mount Ronan, we birth weigh the lambs, tag them and record their pedigree information. Any positive or negative observations are recorded, and each ewe is given a mothering score.

This score is derived from a combination of characteristics. Lamb awareness, especially with multiples, quietness, and lack of concern for human intervention help derive the score.

All ewes are scored the same way, and the White Suffolk and Maternal ewes are run together in the same flocks. Consequently the mothering scores for dams of White Suffolk rams can be directly compared with those for Maternal rams..... unlike all the ASBVs.

An **MS10** ewe will stand next to you when you weigh and tag the lambs. She may sniff you and the lambs and even take time out to nip a bit of pasture while she waits for you to finish weighing and tagging the lambs. She is quite relaxed, but totally aware of the lambs at the same time.

An **MS9** ewe is pretty relaxed about the whole procedure, but only approaches to a distance of about one to three metres. She is completely aware of the lambs and returns immediately after you back away.

An **MS8** ewe walks back and forwards, or stands more than three metres away. She returns immediately when you back away, and is totally lamb aware during the whole procedure.

An **MS7** ewe may circle five to fifteen metres away from you, and is less lamb aware. She may go looking for her lambs near another ewe, but will return immediately once she has "regained her bearings". She will remother the lambs immediately.

**MS7** is the lowest scoring ewe we consider keeping in our flock, though she will perform extremely well in all commercial prime lamb operations. We don't find many ewes with score seven characteristics any more, even in the ewe lamb flock.

**Note:** If ewes have freshly lambled, they will tend to score higher because they are in a more protective mode. As time after lambing increases they will score lower, as they realise that the lambs are ready to move away with them from the birth site.

Each year a ewe's score may change slightly depending on circumstances.

**But generally, an outstanding mother is always an outstanding mother.**

An **MS10** ewe at lamb tagging time, 2013.  
This ewe produced natural triplets in 2014.

# **ewe efficiency index**

The Efficiency Index of this year's sale rams only reflects their dams' performance for the 2014 drop of lambs. 2014 was the first year that we collected this new data. In future years the individual ewe index will become more meaningful if the ewes are good enough to remain in the breeding flock.

A part of the Ewe Efficiency Index can be attributed to the performance of the sire, as the lamb's growth etc are a combination of the sire and the dam. However, we expect to be able to isolate the genetics of ewe efficiency in the same way that any other attribute is assessed via the LAMBPLAN program.

## **SOME THINGS TO REMEMBER ABOUT THIS RATING:**

- Triplet-bearing ewes will score higher if they have the ability to raise all their lambs and grow them well in the first 100 days after lambing
- Twin bearers can wean 100% of their mating weight in 100 days if they are very efficient performers
- Single bearers will usually be unable to produce 100% of their own mating weight of lamb in 100 days. To do so would be a truly amazing performance
- Ewe lambs are dropping their lambs late in the season, and as a result, will have significantly lower scores than older ewes. This is because they generally produce less milk, produce lighter lambs at birth, and are presented with a shorter feed season after lambing. This is especially the case at Mount Ronan!
- We are searching for ewes with a genetically reduced mating weight that have the ability to pump out maximum kilograms in the first 100 days after lambing. We are establishing the "sweet spot" for ideal mating weight genetics. This ongoing research in the Mount Ronan breeding program will deliver us valuable SRW (Standard Reference Weight) information
- **Our ewe efficiency research will eventually result in the provision of a very accurate Ewe Efficiency Index which will enable professional lamb producers to really focus on the selection of outstanding profit-maximising genetics**

A Mount Ronan recipient ewe with a late July drop E.T. lamb. (Late August 2015) This lamb is less than one month old!  
The resulting lambs from this program are simply magnificent.

A couple of one month old E.T. lambs just starting to nibble grass.

# **PRODUCER FORUM**

The inaugural producer presentation and forum was held at Mount Ronan on Friday 13 July, with about 25 producers attending. The participants introduced themselves and briefly spoke about their farm structure and specifically the sheep enterprises they were running.

The **Mount Ronan Prime Lamb Producer Group** was launched at the forum. The formation of a producer group is a logical extension of the service we have been providing to our producers over the decades, and membership of the group will offer them greater control over their enterprise decision making and profitability.

**The feedback loops between processors, researchers, consultants, agents, genetics providers and lamb producers are often fragmented, sometimes misleading and generally lacking in focus and direction.**

## **Some possible benefits from involvement in the producer group:**

- Fostering of closer relationships between producers to assist them to maximise profitability/ha
- Provision of genetic information, breeding advice, new technologies and research findings etc
- Increasing marketing flexibility for producers, product branding, feeder/breeder sales on Auctions Plus
- Opportunities for internal trading and other synergies between producers and other sectors of industry
- Provision of guest speakers with relevant experience and expertise
- Abattoir tours, regional meetings on properties, farm tours, workshops
- Flock management tools, pastures, sheep handling equipment etc
- Flock recording, data provision, benchmarking

## **Producer Group Registration**

Commercial lamb producers who are using Mount Ronan genetics are eligible to become members of the Mount Ronan Prime Lamb Producer Group.

We would like you to officially register your intention to join so that we have a definite list of interested producers to keep updated.

**In order to become a member, you simply need to register by contacting us by email.** There is no compulsion and no charge and you can be as active or as passive as you like. You don't need to sign anything.

Andrew and Jane Hunter's late July-August drop lambs sired by Mount Ronan Maternal rams. (Yerong Creek, NSW)

Top draft averaged \$208.92 per head including \$7.28 skins. Average carcase weight - 34.77kgs (580 cents/kilo).

JB Swift, Goulburn (June 2015)

# **WHITE SUFFOLK TERMINAL SIRE REFERENCES**

(With ASBV's as at 15/09/2015)

**NLW Explanation.** This ASBV is expressed as a percentage. (NLW%) Rams with a more positive NLW% ASBV will generally sire daughters that wean a higher percentage of lambs. The accuracy of NLW% is not high, and heritability is low, so producers should still use it as a guide only at this stage.

## **MOUNT RONAN 100337**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.53</b>	<b>9.7</b>	<b>15.4</b>	<b>-0.2</b>	<b>2.9</b>	<b>-1</b>	<b>209.9</b>	<b>116.0</b>

An exceptional White Suffolk ram with excellent early growth and muscling. Top 5% for tenderness and top 10% for intra-muscular fat, resulting in outstanding eating quality genetics. Has an exceptionally quiet temperament, an outstanding constitution and positive lambing ease genetics.

MOUNT RONAN 100337 is represented by many sons and grandsons in the catalogue.

Sons of MOUNT RONAN 100337 can be safely used to mate ewe lambs.

## **MOUNT RONAN 100074**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>-0.08</b>	<b>7.5</b>	<b>12.8</b>	<b>-0.3</b>	<b>2.0</b>	<b>-6</b>	<b>186.3</b>	<b>112.5</b>

A White Suffolk ram with lower birth weight genetics, balanced ASBV's, and outstanding lambing ease genetics. Excellent genetics for mating ewe lambs.

## **MOUNT RONAN 120045**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.24</b>	<b>8.2</b>	<b>13.4</b>	<b>-0.9</b>	<b>2.9</b>	<b>-4</b>	<b>202.6</b>	<b>113.8</b>

A White Suffolk son of MOUNT RONAN 100337. Solid growth with excellent muscling and positive lambing ease genetics. Sons of MOUNT RONAN 120045 are suitable for mating ewe lambs.

## **MOUNT RONAN 130027**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.20</b>	<b>9.0</b>	<b>13.9</b>	<b>0.1</b>	<b>3.6</b>	<b>0</b>	<b>210.0</b>	<b>114.8</b>

A White Suffolk son of LAMBPRO 104020. A very good combination of growth and muscling. Sons of MOUNT RONAN 130027 are not recommended for mating ewe lambs because his sire has negative lambing ease genetics.

# **WHITE SUFFOLK TERMINAL SIRE REFERENCES**

(With ASBVs as at 15/09/2015)

## **MOUNT RONAN 130040**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.30</b>	<b>7.8</b>	<b>12.8</b>	<b>-0.1</b>	<b>3.1</b>	<b>1</b>	<b>198.1</b>	<b>113.2</b>

Another White Suffolk son of MOUNT RONAN 100337. Good growth with plenty of muscle. Well balanced ASBV's. Sons of MOUNT RONAN 130040 are suitable for mating ewe lambs.

## **MOUNT RONAN 130121**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.28</b>	<b>8.9</b>	<b>13.8</b>	<b>-0.4</b>	<b>3.2</b>	<b>-1</b>	<b>207.7</b>	<b>114.5</b>

Another White Suffolk son of LAMBPRO 104020. Good growth with plenty of muscle. Well balanced ASBV line. Sons of MOUNT RONAN 130121 are not recommended for mating ewe lambs because his sire has negative lambing ease genetics.

## **MOUNT RONAN 130461**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.23</b>	<b>8.3</b>	<b>14.0</b>	<b>-0.2</b>	<b>2.8</b>	<b>8</b>	<b>201.0</b>	<b>113.6</b>

A White Suffolk son of MOUNT RONAN 110349. Good growth and muscling combination. Positive lambing ease genetics. Sons of MOUNT RONAN 130461 could be used to mate ewe lambs.

## **BERKLEY 110025**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.67</b>	<b>12.7</b>	<b>20.2</b>	<b>-1.9</b>	<b>0.4</b>	<b>2</b>	<b>212.7</b>	<b>116.3</b>

A White Suffolk ram with exceptional growth in a late maturing pattern. Used selectively on very muscular White Suffolk ewes. Sons of BERKLEY 110025 are definitely not recommended for mating ewe lambs because this sire has negative lambing ease and higher birth weight genetics.

## **FARRER 110155**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.13</b>	<b>9.5</b>	<b>14.6</b>	<b>-0.7</b>	<b>3.1</b>	<b>5</b>	<b>210.7</b>	<b>116.7</b>

A very widely used White Suffolk ram with a very well balanced ASBV line. Lower birth weight genetics. Ideal for mating ewe lambs. Sons of FARRER 110155 are not recommended for mating ewe lambs because this sire has negative lambing ease genetics.

# **WHITE SUFFOLK TERMINAL SIRE REFERENCES**

# Extended Bowen Family – "Team Mount Ronan"

Guy encouraging granddaughter Madison to like sheep.

Maike, (from Germany), helping to draft sheep.

4 men and 2 dogs – Tobias, (from Germany), Clive, Declan and Mitch. Think they were fencing when not posing!

Martin, (from Germany), and the lovely Jess (from England), enjoying the lambs. Jess had visited us previously in 2014.

Dave, (from England), hard at work with shearers, Leon and Sean.

Hannah and Elise. Elise is currently living in Maroochydore, Qld, and coordinates the management of our breeding data.

Kirby and Liam showing Madison some sheep – of course!

Sophia, (from Germany), helped us get ready for the sale.

Joanne and Madison discussing the merits of sheep!

Alex, (from America), enjoyed the pet lambs too.

Soënke, (from Germany), helping Declan to weigh sheep.

Nina and Daniel, (from Austria), helping vet Michylla with AI.

Irina, (from Italy), tagging new born lambs.
