## WHITE SUFFOLKS & MATERNALS

*Specialising in the breeding of elite quality prime rams*

2nd Annual Summer

RAM SALE

**Friday 29th January 2016**

**On-property at York**

**Commencing at 1.00pm**

Inspections from 11.00am.

BBQ lunch and refreshments provided

---

**42 WHITE SUFFOLK RAMS 42**  
**28 MATERNAL RAMS 28**

SPECIALLY SELECTED FLOCK RAMS

---

ACCREDITED BRUCELLOSIS FREE FLOCK No. OV/AC/044

One-year-old ewe lambs with newborns at Mount Ronan. World class mothering genetics in action. (26th August 2014).

***"The profitability of our producers' prime lamb enterprises is the key to the future of Mount Ronan."***

# **WELCOME TO MOUNT RONAN.....**

2015 marked the 50<sup>th</sup> anniversary of my introduction to the wonders of sheep breeding. Such a young fellow then, a pretty oldish fellow now, but the excitement has continued to intensify over time.

In the general shift away from specialist wool production, the use of high-powered, high-efficiency sheep genetics allows producers to “ratchet up” on-farm profitability in their prime lamb enterprises. It offers them greater control over marketing decisions and definitely decreases their risk profile.

The lamb industry is transitioning to one of sectoral specialization. There will be opportunities for producers to specialise in breeding, growing or finishing lambs to suit their environmental circumstances, farm structure or lifestyle considerations. Right now I am witnessing the greatest change in the sheep industry in my lifetime..... and it is all good news as far as I am concerned.

Oh to be that younger fellow again!!!

Guy with his first stud lamb.....  
a Shropshire, 1968.

## **What is the Mount Ronan breeding program all about?**

The Mount Ronan breeding program is aimed “fairly and squarely” at maximising producers’ lamb enterprise profitability. The difference between our breeding program and most others is that we have always placed a much greater breeding value on ewes than rams. I truly believe that the greatest rate of genetic gain is made by a detailed study and observation of female type and performance. This view is supported by investigation into cellular physiology at a mitochondrial level. The mitochondria are the power stations of the living cells.

The identification of those truly proven-elite ewes in our flock which possess outstanding production genes is our focus. We select sons of these ewes to spread their genes widely throughout the flock, and we also introduce new genetics via these ewes. If they are artificially inseminated to new-blood rams and the progeny are less than outstanding performers, then we know that those rams are simply not good enough for our purposes.

The use of outside genetics is essential for genetic diversity, and also helps with genetic linkages on Lambplan and greater accuracy of ASBVs.

In 2015 we embryo flushed six of our highest efficiency ewes and 43 lambs were born. Most are excellent and some are really outstanding. We will probably be increasing the scale of the ET program subject to annual analysis.

As usual we used ram lambs for the 2015 drop with consistently good results. The progeny of some of the ram lambs are simply magnificent and we have identified at least three of these young sires as real ‘five star’ quality.

## **THIS YEAR'S SALE OFFERING**

The rams we are offering to producers are fit and athletic, and ready to go to work. We are really satisfied that we can again offer a line of rams with a positive ASBV production balance. In other words, positive growth with positive muscling. There is some variation in genetic fat levels for producers chasing extra yield for later maturity lamb finishing systems.

Generally however, our genetic offering targets the production of prime lambs with high early growth to heavy weights. The genetic balance between early growth, fat and muscling is the key for a profitable enterprise, combined with outstanding mothering attributes, constitutional strength and excellent producer management.

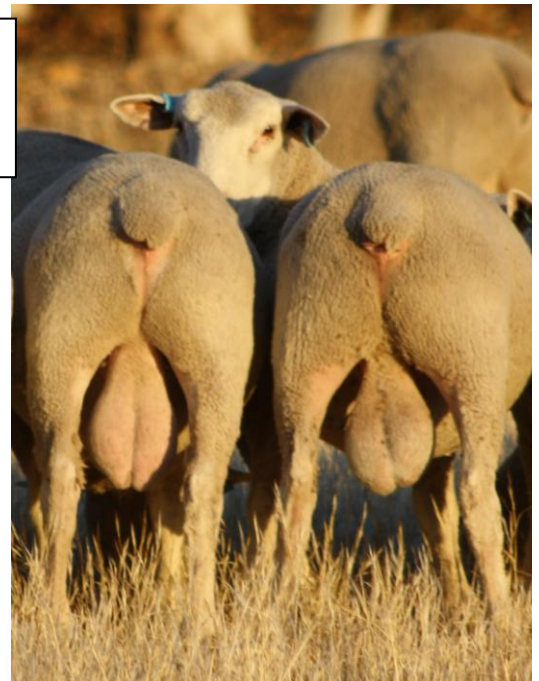

Our flock is accredited Brucellosis free (OVAC 44), and all rams have received Glanvac B12 6in 1, Eryvac and Scabby Mouth vaccinations.

In addition, the rams have been vaccinated for OJD, which accounts for the horrible lumps on their necks.

This is being done as insurance against the possibility of a false positive diagnosis during abattoir surveillance.

We anticipate that these rams will continue to uphold the wonderful reputation of Mount Ronan genetics.... a reputation forged over decades for outstanding commercial performance and constitutional strength.

2016 sale rams – 3 weeks ago. Just starting to flesh up ready for the big day. Started trail feeding some pellets 3 weeks before the sale, then put on ad lib pellets for the last week.

### **The on-going story of Mount Ronan 110583**

Remember this young chap? Photo taken when he was about 12 months old. Mount Ronan 110583 was purchased by Cherylton Farms at Kojonup as a 12 week old lamb, for \$3,000. Mount Ronan retained 50% semen marketing rights and his semen has been used in White Suffolk studs right across Australia. He has also been extensively used at Cherylton Farms in its very successful commercial maternal breeding program.

583 is sired by the outstanding Mount Ronan ram 100337, and these elite genetics are dispersed right throughout the Mount Ronan flock.

583's Lambplan figures have continued to improve significantly the more he has been used in Lambplan flocks. He is a true "super sire", being currently ranked 5<sup>th</sup> on the LAMB2020 Index for all terminal sires of all breeds ever tested on LAMBPLAN. However, he is arguably the most outstanding sire when his balance of ASBV's are taken into consideration. He has easy lambing genetics, wonderful early growth, exceptional muscling, very good worm resistance (PWEC), an ideal level of genetic fat (PFAT) and excellent eating quality genetics. Eating quality genetics are chiefly determined by a combination of intramuscular fat (IMF) and tenderness (SHEAR FORCE).

In addition, he has an outstanding constitution.

BWT	WWT	PWT	PFAT	PEMD	PWEC	CARCASE PLUS	LAMB 2020	IMF	SHEAR FORCE
0.33	10.6	18.2	0.0	4.0	-40	234	119.6	0.18	-1.5

**583 is a very rare genetic package indeed.**

## **Long history of production genetics**

My concept of the ideal meat sheep has not changed over the last 50 years. The heavily-muscled, fast-growing, medium-legged animal with smooth shoulders, a long deep barrel, width across the loins and area in the hind quarters, has always been the Mount Ronan type. Coupled with this is selection for hardiness and mothering ability .... females which lamb easily and grow lambs quickly..... females which can count to at least three and nourish multiple offspring.

The transition from a breeding program producing specialist terminal/meat genetics to one including specialist maternal/mothering genetics has been a very simple one for Mount Ronan. All those decades of selection for mothering ability, temperament and maternal performance has resulted in terminal ewes which are exceptional maternals as well.

When the dedicated Maternal program was initiated in 2003, we introduced the best available maternal genetics from Australia and New Zealand. We found some outstanding individual sheep, but generally a lot of the introduced stock was weeded out pretty quickly. They simply "lacked grunt", and essentially all of them were deficient mothers compared to our home-bred ewes.

It was the infusion of the hardy, high-performance Mount Ronan White Suffolk genetics which, when incorporated into the foundation stock, had the greatest impact on production. Most Mount Ronan Maternals have at least 50% Mount Ronan White Suffolk genetics in their makeup.

We have selectively introduced New Zealand maternal genetics into our program over more recent years but have found them to be lacking in grunt generally. After a couple of "run throughs" of the White Suffolk flock, they begin to harden up constitutionally.

### **The 'grunt gene' remains King at Mount Ronan !!.....**

**.....that's the Mount Ronan trademark.**

The type of sheep we are breeding now are the type of sheep we have always produced..... it's just that we are continuing to identify those truly outstanding animals which provide the extra genetic boost in performance with consequent higher levels of profitability per hectare.

Our identification and utilisation of those outstandingly efficient females will be intensified. We have now developed the measurement tools to enable us to identify them more easily. We will continue to embryo flush the proven elite ewes and concentrate on breeding from their top sons and daughters.

The hardy Mount Ronan White Suffolk genetics powers our Maternal program. These genetics go back directly to the outstanding Suffolk flock I founded in 1969.

2006 drop White Suffolk lambs at Mount Ronan. Muscular, growthy, high-yield genetics have always been the focus over the decades.

### **First maternal ewes resulting from the ET program in 2003.**

These sheep were a mixture of 25% Finn, 25% Texel, 25% East Friesian and 25% Border Leicester genetics.

Producers who used ram progeny out of these ewes received outstanding results in the early days of the Maternal program. The modern Maternals we are now producing are much more powerful, productive animals.

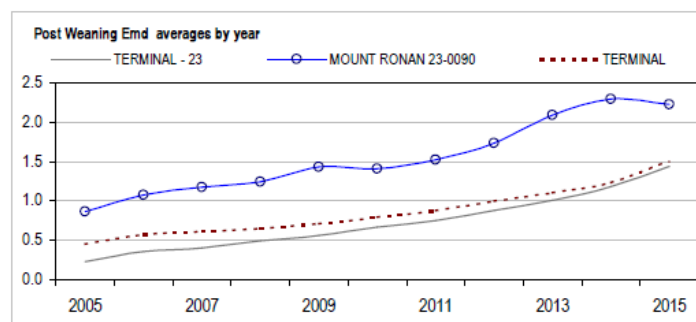

# WHITE SUFFOLK PROGRAM STILL TOP SHELF

The table below shows the progress of Mount Ronan terminal flock ASBVs in the last decade, compared with the average of all LAMBPLAN (SGA) measured White Suffolk flocks in Australia (Terminal 23). There is an immense difference between the average muscle ASBV (Pemd) of the Mount Ronan White Suffolk flock and that of the average White Suffolk flock in Australia. The average Mount Ronan White Suffolk sheep on LAMBPLAN is almost **twice as muscular** as the average White Suffolk sheep on LAMBPLAN.

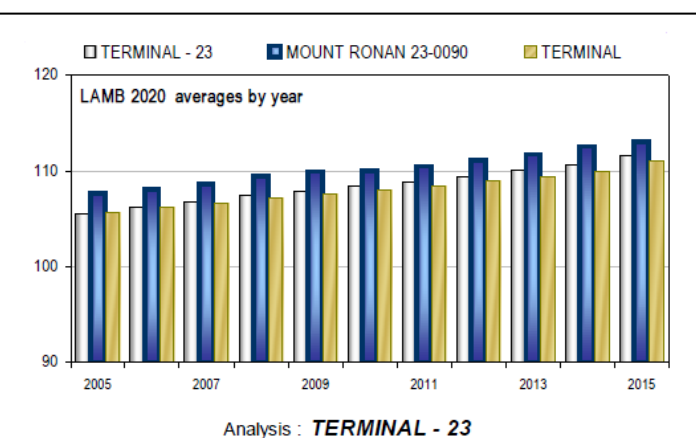

Mount Ronan White Suffolk sheep have always been far more muscular than the average White Suffolk sheep on LAMBPLAN in Australia, and the flock has always possessed higher than average growth-rate genetics.

As a result of these factors, and because Mount Ronan birth weight genetics are below average, lambs sired by Mount Ronan rams are generally born easily and grow muscle mass very quickly. This greatly reduces time to slaughter and results in increased carcase yield.

The average Pfat ASBV for the Mount Ronan White Suffolk flock is ideal to cater for matings with Merino or Maternal ewes.

Above: Comparison between the average eye muscle depth of the White Suffolk flock on LAMBPLAN and the average eye muscle depth of the MOUNT RONAN White Suffolk flock on LAMBPLAN.

Above: Comparison of MOUNT RONAN Lamb 2020 Index with the White Suffolk LAMBPLAN tested breed average.

2015	0.30	8.85	14.06	-0.53	2.23	113.1	197.4

Using the power of Mount Ronan genetics will put more money in your wallet ...

**The accuracies of the ASBVs are extremely high because Mount Ronan has measured more sheep on LAMBPLAN than most other stud flocks in Australia.....and**

**The ASBV's of the Mount Ronan White Suffolk flock are impressive compared to the average ASBVs of all the White Suffolk flocks that are recorded on LAMBPLAN, particularly because the ASBV lines are so well balanced.**

	BWT	WWT	PWWT	PFAT	PEMD	LAMB2020	CARCASE +
Mount Ronan average	0.30	8.85	14.06	-0.53	2.23	113.1	197.4
White Suffolk average	0.30	8.59	13.52	-0.52	1.44	111.6	185.8

# **SO WHAT'S THE DIFFERENCE BETWEEN OUR MATERNALS AND OUR WHITE SUFFOLK SHEEP?**

The breeding objectives for our White Suffolks and Maternals are heading in the same direction really. The two "types" of sheep we are producing are becoming pretty interchangeable and that is a great advantage for us as well as for our producers. We have significantly increased the diversity of the gene pool, improved type stabilisation and created significant linkages between the Terminal and Maternal datasets on Lambplan. This will improve ASBV accuracies over time.

Perhaps the main differences between the two breeding programs at the moment is that we are concentrating on muscling up the Maternals and adding more 'grunt' genes, plus a bit more fat and a bit more fertility. We have been shifting our focus towards higher early growth over the last few years in both programs and we have also raised fat levels in the White Suffolk flock to complement the 100-day growth focus.

**Whether the ewe lambs are from Mount Ronan White Suffolk or Mount Ronan Maternal rams, they are ideally suited for use in a self-replacing lamb breeding flock.....so start collecting them immediately!!!**

Our most recent and most critical innovation, as I mentioned before, is the identification of the most genetically efficient ewes in both flocks and our greatest genetic gains will result from better use of these outstanding sheep.

## **UNDERSTANDING THE DIFFERENT INDICES**

The **Carcase Plus Index** is calculated using 65% emphasis on growth, 5% emphasis on leanness, and 30% emphasis on muscling. It does not include birth weight, or worm resistance. This index is better suited to the production of lambs over 24kgs carcase weight.

The **LAMB 2020 Index** is calculated using 57% emphasis on growth, 9% emphasis on leanness, 22% emphasis on eye muscle depth and 12% emphasis on worm egg count. This index is ideal for producing 20 – 24kg carcasses.

The **Maternal \$ Index** is calculated using 64% emphasis on growth, 4% emphasis on fat, 5% emphasis on eye muscle depth, 16% emphasis on number of lambs weaned percent, 8% emphasis on worm egg count and 3% emphasis on yearling greasy fleece weight.

The **Self-Replacing Carcase \$ Index** is calculated using 65% emphasis on growth, 5% emphasis on fat, 10% emphasis on eye muscle depth, 14% emphasis on number of lambs weaned percent and 6% emphasis on worm egg count.

**We prefer to use the LAMB 2020 Index for Terminals and find that the Self-Replacing Carcase \$ Index better suits our Maternal breeding program goals.**

When selecting rams for breeding programs, buyers need to pay special attention to the ASBV's in order to choose the most appropriate ram for their individual enterprise. Indices are simply a guide for selection.

## **LAMBPLAN'S TRAIT LEADERS**

Many of our sale rams are trait leaders. In other words, they are in the top 10% of the LAMBPLAN database for growth, leanness, muscling, or a combination of these traits. They are in the top 10% of all the rams of all breeds measured in the LAMBPLAN program in 2015 in Australia and New Zealand.

**Trait leaders are noted in the comments for each ram.**

# **MOTHERING SCORE**

When the ewes are lambing at Mount Ronan, we birth weigh the lambs, tag them and record their pedigree information. Any positive or negative observations are recorded, and each ewe is given a mothering score.

This score is derived from a combination of characteristics. Lamb awareness, especially with multiples, quietness, and lack of concern for human intervention help derive the score.

All ewes are scored the same way, and the White Suffolk and Maternal ewes are run together in the same flocks. Consequently the mothering scores for dams of White Suffolk rams can be directly compared with those for Maternal rams..... unlike all the ASBVs.

An **MS10** ewe will stand next to you when you weigh and tag the lambs. She may sniff you and the lambs and even take time out to nip a bit of pasture while she waits for you to finish weighing and tagging the lambs. She is quite relaxed, but totally aware of the lambs at the same time.

An **MS9** ewe is pretty relaxed about the whole procedure, but only approaches to a distance of about one to three metres. She is completely aware of the lambs and returns immediately after you back away.

An **MS8** ewe walks back and forwards, or stands more than three metres away. She returns immediately when you back away, and is totally lamb aware during the whole procedure.

An **MS7** ewe may circle five to fifteen metres away from you, and is less lamb aware. She may go looking for her lambs near another ewe, but will return immediately once she has "regained her bearings". She will remother the lambs immediately.

**MS7** is the lowest scoring ewe we consider keeping in our flock, though she will perform extremely well in all commercial prime lamb operations. We don't find many ewes with score seven characteristics any more, even in the ewe lamb flock.

**Note:** If ewes have freshly lambled, they will tend to score higher because they are in a more protective mode. As time after lambing increases they will score lower, as they realise that the lambs are ready to move away with them from the birth site.

Each year a ewe's score may change slightly depending on circumstances.

**But generally, an outstanding mother is always an outstanding mother.**

An **MS10** ewe at lamb tagging time, 2013.  
This ewe produced natural triplets in 2014.

# **EFFICIENCY INDEX**

The Efficiency Index of this year's sale rams reflects their dams' performance for the 2014 and 2015 drop of lambs. 2014 was the first year that we collected this new data. In future years the individual ewe index will become more meaningful if the ewes are good enough to remain in the breeding flock.

A part of the Efficiency Index can be attributed to the performance of the sire, as the lamb's growth etc are a combination of the sire and the dam. However, we expect to be able to isolate the genetics of ewe efficiency in the same way that any other attribute is assessed via the LAMBPLAN program.

## **SOME THINGS TO REMEMBER ABOUT THIS RATING:**

- Triplet-bearing ewes will score higher if they have the ability to raise all their lambs and grow them well in the first 100 days after lambing
- Twin bearers can wean 100% of their mating weight in 100 days if they are very efficient performers
- Single bearers will usually be unable to produce 100% of their own mating weight of lamb in 100 days. To do so would be a truly amazing performance
- Ewe lambs are dropping their lambs late in the season, and as a result, will have significantly lower scores than older ewes. This is because they generally produce less milk, produce lighter lambs at birth, and are presented with a shorter feed season after lambing. This is especially the case at Mount Ronan!
- We are searching for ewes with a genetically reduced mating weight that have the ability to pump out maximum kilograms in the first 100 days after lambing. We are establishing the "sweet spot" for ideal mating weight genetics. This ongoing research in the Mount Ronan breeding program will deliver us valuable SRW (Standard Reference Weight) information
- **Our ewe efficiency research will eventually result in the provision of a very accurate Efficiency Index which will enable professional lamb producers to really focus on the selection of outstanding profit-maximising genetics**

## **POST-WEAN G/DAY**

This new information measures the daily weight gain for each ram from the time of weaning until the day they were LAMBPLAN scanned just prior to the sale. This gives an indication of the ability of the rams to thrive as individuals after weaning.

There is a big variation in daily weight gain across the offering, and clearly this is not due to genetics alone.

Points to ponder:

- When examining the daily weight gain for rams from weaning, be aware that rams which were at the heavier end of the weight range at weaning due to birth type or growth genetics, usually continue to grow at a slower daily rate after weaning.
- The rams that were lighter at weaning because they were twins from older or younger ewes, or were born later, will often grow at a faster daily rate due to a natural compensation effect.
- **In other words.....don't rely too heavily on individual weight gain of rams, this information is simply another of your new selection tools.**
- Similarly a dam's "Efficiency Index" can be affected by the feed environment the ewes are experiencing from season to season, and the management groups to which they belong. Ewes in different management groups will experience different levels of feed availability and some ewes will be penalised while others will be advantaged.

# **PRODUCER FORUM**

The **Mount Ronan Prime Lamb Producer Group** was launched during 2015. The formation of a producer group is a logical extension of the service we have been providing to our producers over the decades, and membership of the group will offer them greater control over their enterprise decision making and profitability.

**The feedback loops between processors, researchers, consultants, agents, genetics providers and lamb producers are often fragmented, sometimes misleading and generally lacking in focus and direction.**

## **Some possible benefits from involvement in the producer group:**

- Fostering of closer relationships between producers to assist them to maximise profitability/ha
- Provision of genetic information, breeding advice, new technologies and research findings etc
- Increasing marketing flexibility for producers, product branding, feeder/breeder sales on Auctions Plus
- Opportunities for internal trading and other synergies between producers and other sectors of industry
- Provision of guest speakers with relevant experience and expertise
- Abattoir tours, regional meetings on properties, farm tours, workshops
- Flock management tools, pastures, sheep handling equipment etc
- Flock recording, data provision, benchmarking

## **Producer Group Registration**

Commercial lamb producers who are using Mount Ronan genetics are eligible to become members of the Mount Ronan Prime Lamb Producer Group.

We would like you to officially register your intention to join so that we have a definite list of interested producers to keep updated.

**In order to become a member, you simply need to register by contacting us by email.** There is no compulsion and no charge and you can be as active or as passive as you like. You don't need to sign anything.

### **NEXT EVENT – Keep a look out!!**

We are organising a forum and field day for all members later in March. The venue will be in the South West, and will focus on lamb enterprise benchmarking and management strategies for greater profitability. The keynote presenter will be Dr Andrew Whale, Director/Livestock Vet, Livestock Logic, Hamilton, Victoria, who specialises in animal health and animal production systems, especially within the sheep industry.

Andrew is a passionate, brilliant young fellow with a lot to offer. Producers will be able to stuff their backpacks and handbags with plenty of valuable information from this workshop.....also be on the lookout for trade displays, particularly *WA Rural Pumping Solutions* – Mike Jacobson 0409 102 021. Mike helped us out of a “sticky” situation recently, by setting us up with a wonderful solar pumping system .....

More details will follow shortly, and the event will be promoted in the media in late February.

### **Please note:**

Mount Ronan stipulates that all rams which are to be registered and transferred into stud flocks will require a total payment of \$1500 (excluding GST).

If rams are purchased at the auction for less than \$1500 and the buyer wishes to have the rams transferred and registered for stud use, then the purchaser will be required to make up the difference between the purchased price and \$1500 (plus GST) before the transfer and registration can take place.

# **WHITE SUFFOLK TERMINAL SIRE REFERENCES**

(With ASBVs as at 15/01/2016)

**NLW Explanation.** This ASBV is expressed as a percentage. (NLW%) Rams with a more positive NLW% ASBV will generally sire daughters that wean a higher percentage of lambs. The accuracy of NLW% is not high, and heritability is low, so producers should still use it as a guide only at this stage.

A White Suffolk son of the outstanding sire MOUNT RONAN 110583. Used as a ram lamb. Excellent high production ASBV balance. Lower birthweight genetics.

## **ASHMORE 080179**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.02</b>	<b>9.3</b>	<b>14.2</b>	<b>0.7</b>	<b>2.6</b>	<b>10</b>	<b>198.3</b>	<b>114.9</b>

A White Suffolk son of ASHMORE 060263. Highly used sire in many flocks. Very good growth and muscle with lower birthweight genetics.

## **BERKLEY 110025**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.65</b>	<b>13.0</b>	<b>20.9</b>	<b>-1.9</b>	<b>0.4</b>	<b>1</b>	<b>215.1</b>	<b>116.6</b>

A very lean White Suffolk ram with huge growth. Used selectively on MOUNT RONAN ewes with higher fat and muscle genetics.

# **WHITE SUFFOLK TERMINAL SIRE REFERENCES**

(With ASBVs as at 15/01/2016)

## **FARRER 130075**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.20</b>	<b>8.2</b>	<b>13.9</b>	<b>0.5</b>	<b>5.0</b>	<b>2</b>	<b>223.1</b>	<b>118.7</b>

A White Suffolk son of MOUNT RONAN 1100583. Outstanding muscle genetics, but limited progeny in the Mount Ronan flock.

## **WOOLUMBOOL 127814**

<b>BWT</b>	<b>WWT</b>	<b>PWWT</b>	<b>PFAT</b>	<b>PEMD</b>	<b>NLW%</b>	<b>CARCASE +</b>	<b>LAMB 2020</b>
<b>0.07</b>	<b>9.3</b>	<b>15.9</b>	<b>-1.0</b>	<b>2.5</b>	<b>11</b>	<b>209.2</b>	<b>115.7</b>

A robust White Suffolk ram with low birth weight, high growth and good muscling genetics. Leaner genetics. High daughter fertility indicated.

# Extended Bowen Family – "Team Mount Ronan"

Guy encouraging granddaughter Madison to like sheep.

Maike, (from Germany), helping to draft sheep.

4 men and 2 dogs – Tobias, (from Germany), Clive, Declan and Mitch. Think they were fencing when not posing!

Martin, (from Germany), and the lovely Jess (from England), enjoying the lambs. Jess had visited us previously in 2014.

Dave, (from England), hard at work with shearers, Leon and Sean.

Hannah and Elise. Elise is currently living in Maroochydore, Qld, and coordinates the management of our breeding data.

Kirby and Liam showing Madison some sheep – of course!

Sophia, (from Germany), helped us get ready for the sale.

Joanne and Madison discussing the merits of sheep!

Alex, (from America), enjoyed the pet lambs too.

Soënke, (from Germany), helping Declan to weigh sheep.

Nina and Daniel, (from Austria), helping vet Michylla with AI.

Irina, (from Italy), tagging new born lambs.
